

Sites Reservoir Construction Contractor Open House

The generational **Sites Reservoir Project** is making significant progress toward building a more resilient and flexible water future for California having secured vital local, state, and federal funding. The Sites Project Authority is now seeking input from the contracting community on the delivery of nearly **\$4 billion of infrastructure** including dams, pipelines, pump stations, roads and more. The Authority plans to start-up this new offstream 1.5 million acre-foot reservoir as early as 2030 and requests your help and expertise!

Please join us for the Authority's first contractor information session. The Project's Engineering and Construction Manager will provide an overview of the project and share information on issues related to construction packages, delivery methods, and schedule. This is an opportunity for contractors to learn about the largest water infrastructure project in California and provide early input on the construction of an important asset for the future of California's environment, farms, and families.
