

***This action item summary will inform the Boards of the follow-up to the requests during the March Joint meeting.***

<b>Action Item</b>	<b>Status</b>
Provide an estimate of the amount of water being exchanged that is creating the positive benefits in the WRLCM for winter run salmon.	Creating this estimate requires a more detailed analysis which can be done after higher priority work related to the water right and permitting efforts are completed. The estimate will be requested in the final WRLCM documentation.
Make the request to the science center for the model itself so the Authority can understand better what the results mean and how they were derived.	A request will be made to include this in the final WRLCM documentation.
Provide RC/AB the governance slide deck and request individual responses to the questions.	Sent to participants on March 21, 2023.
Include in the B&O contract specifying the threshold for making changes to what constitutes a material change and identify a process for how these changes will be evaluated and considered by the Boards.	Will be considered in the governance provisions in the B&O Contract and proposed changes to the Bylaws and JPA.
Bring back a discuss/info item on the allocation of risk as the reservoir approaches deadpool. This should be done before the soft call.	Presented at E&O Workgroup 4/12 and an agenda item at RC/AB meeting 4/21.
